

Day 2 Task

1. Write a program to create a page the same as in the given image:

1 Candidate Info

Your Name *

Your Email *

About yourself

Interests:

Fishkeeping

2 Additional Info

About Your School

Submit

2. Create a web page with a news channel headline (scrolling text effect).

3. Create a web page with a keyframe animation including at least three different animations such as the Bounce Up effect

4. Create a web page of a simple form asking for user details such as email address and password with a stylesheet that defines two different layouts: one for desktop screens and one for mobile screens.
5. 3rd task - form which was already created on day 1, now you have to store that data into a database here we will be using Firebase (database) - Please refer to its documentation for more detail. At last whatever data users insert in a form that needs to be stored in the Firebase.
